CORE COMPETENCIES

- Data Analysis
- Predictive Analytics
- Business Intelligence Strategies
- Statistical Modeling
- Data Visualization
- AI/ML Concepts
- Data Governance
- User Experience Optimization
- Cross-Functional Collaboration

SOFT SKILLS

EDUCATION

- **2025:** B.Tech. in Artificial Intelligence & Machine Learning from KSIT (Visvesvaraya Technological University) with GPA: 3.0

TECHNICAL SKILLS

- **SQL:** Complex JOINs, CTEs, GROUP BY, Subqueries, Aggregations
- **Data Visualization:** Power BI, Matplotlib, Seaborn, Excel
- **Programming:** Python (Pandas, NumPy, Scikit-learn, OpenCV, Hugging Face).
- **Machine Learning (Applied):** Regression, Classification, NLP basics
- **Tools & Platforms:** Git, GitHub, VS Code, Jupyter Notebook
- **Analytics:** KPI Analysis, Trend Analysis, Forecasting

CERTIFICATIONS

- Complete Python Bootcamp from Udemy
- Data Visualization in Power BI from DataCamp
- Advanced SQL from DataCamp

PERSONAL DETAILS

Languages Known: English, Hindi, Kannada

Address: Bangalore, Karnataka – 560040

PROFESSIONAL SUMMARY

- Possess skills in Data Analytics, GenAI & Machine Learning, focusing on generating actionable insights that improve decision-making across diverse industry sectors.
- Developed a robust skill set encompassing Statistical Analysis and Machine Learning, with a focus on transforming complex data into meaningful narratives that drive business strategies.
- Extensive knowledge of Data Analytics methodologies, such as KPI analysis, trend forecasting, and descriptive statistics, facilitating extraction of insights from a wide range of datasets.
- Proficient in leveraging SQL techniques and Machine Learning algorithms to extract insights from datasets, showcasing a unique blend of technical expertise and analytical thinking.
- Gained exposure to SQL-driven analytics by preparing reports & dashboards for internal teams.
- Developed knowledge of AI/ML applications through exposure in company projects.
- Showcased leadership skills in team settings, communicating data findings to non-technical stakeholders, which fostered a collaborative environment and improved project outcomes.
- Actively engaged in continuous professional development, completing certifications in Advanced SQL and Data Visualization, enhancing the skills to deliver impactful data solutions.

PROFESSIONAL EXPERIENCE

Feb'25 – Aug'25: Trainee Intern | Posspole Pvt. Ltd.

Highlights:

- Built an AI-powered chatbot for the Energy website, increasing user engagement by 40%.
- Developed Machine Learning solutions, including anomaly detection and classification models, enhancing system accuracy by 65%.
- Migrated the proctoring model from Python to the MERN stack, improving scalability and reducing system latency by 50%.

PROJECTS UNDERTAKEN

E-Commerce Business Performance Analysis | [Github] | April 2026

- Cleaned a 1M+ row e-commerce dataset — resolved 243k missing Customer IDs strategically, removed cancellations, capped outliers using IQR, and eliminated 33,862 duplicates, producing 1,007,808 analysis-ready rows.
- Built a 7-KPI business report with cohort retention heatmap and RFM segmentation — identified a 50.9% churn rate representing £2,449,807 revenue at risk and 76% revenue concentrated in Champion segment.
- Built a Linear Regression forecasting model (Scikit-learn) with 5 engineered time features — MAPE 21.2% on a held-out test year, a 6-month forward projection of £627k–£678k monthly revenue.

Employee Attrition EDA | [GitHub] | Mar 2026

- Performed end-to-end exploratory data analysis on IBM HR Analytics dataset (1,470 employees) to identify key drivers of employee attrition using Python (Pandas, Matplotlib, Seaborn).
- Discovered overtime as the strongest attrition predictor — employees working overtime leave at 3x the rate of non-overtime employees (30.5% vs 10.4%), directly informing HR policy recommendations.
- Delivered structured business recommendations on salary benchmarking, overtime reduction, and early-tenure retention programs, framed for non-technical HR stakeholders.

Customer Demographics Descriptive Analysis | [GitHub] | Nov 2025

- Extracted buying behaviour insights from KPMG customer demographic dataset, segmenting customers across 5 wealth quintiles and age groups to support targeted marketing strategy.
- Applied descriptive statistics and data summarization using Python (Pandas, NumPy) to profile high-value customer segments.
- Developed an interactive Power BI dashboard with drill-down capabilities, visualizing customer segments by age group, wealth quintiles, and purchasing patterns.
